PROJECTS

On Road Fuel Demand System
Python, Flask, SQL, HTML, CSS, JavaScript
- Developed a web-based platform for requesting fuel delivery during roadside emergencies.
- Implemented user, driver, and admin modules for managing fuel requests, drivers, orders, and payments.
- Implemented nearest-driver selection using location-based distance calculation.
- Designed database tables to manage users, drivers, fuel orders, and payment records.
- Developed a responsive web interface for placing and tracking fuel delivery requests.

Smart Warehouse and Logistics Collaboration Platform
Python, Django, MySQL, HTML, CSS, JavaScript
- Developed a web-based warehouse platform with **three role-based modules: Main Admin, Warehouse Owner, and Customer**.
- Implemented warehouse listing with **location, available square feet, price, images, and facilities**, allowing customers to search and select suitable warehouses.
- Developed a **booking workflow** where customers can request warehouses and owners can accept or reject booking requests, while the Main Admin approves or rejects newly added warehouses.
- Implemented **10% admin commission calculation, booking management, and report generation** for monitoring warehouse and transaction activities.
